## 1 Introduction

**Hans:** Idea: Take the basic examples from “Random Oracles Are Practical” [BR93] as motivating examples running through the paper.

In the following and throughout,  $\mathcal{H}$  is a random oracle.

### 1.1 Recording ROs (or, Random Oracles are Good PRFs)

We start with the simplest ROM proof imaginable: showing that random oracles are good pseudorandom functions. Specifically, we will show that  $\text{PRF}_k(x) = \mathcal{H}(k||x)$  is indistinguishable from a random function, provided the key  $k$  is hard to guess.

We will do this by showing that if an adversary  $\mathbb{A}$  can distinguish the output of  $\text{PRF}_k$  from random, then a reduction  $\mathbb{B}$  can recover the key  $k$ . Crucially, the reduction does this by *recording* the queries of the adversary  $\mathbb{A}$  to the random oracle  $\mathcal{H}$ .

### 1.2 Reprogramming ROs (or, Random Oracles yield Simple PKEs)

### 1.3 Rewinding ROs (or, Random Oracles yield Efficient Signatures)

Experiment $\text{Exp}_{\text{PRF}}^{\text{ind}}(\mathbb{A})$	Oracle $\mathcal{E}(x)$
$k \leftarrow \mathcal{K}$	<b>if</b> $b^* = 0$ :
$b^* \leftarrow \{0, 1\}$	$y \leftarrow \mathcal{H}(k  x)$
$\hat{b} \leftarrow \mathbb{A}^{\mathcal{H}, \mathcal{E}}$	<b>else</b> :
<b>return</b> $b^* = \hat{b}$	$y \leftarrow \mathcal{R}(x)$
	<b>return</b> $y$

**Fig. 1.** The pseudorandomness indistinguishability game.

Experiment $\text{Exp}_{\text{PRF}}^{\text{ku}}(\mathbb{B})$	Oracle $\mathcal{E}(x)$
$k \leftarrow \mathcal{K}$	$y \leftarrow \mathcal{H}(k  x)$
$\hat{k} \leftarrow \mathbb{B}^{\mathcal{H}, \mathcal{E}}$	<b>return</b> $y$
<b>return</b> $k = \hat{k}$	

**Fig. 2.** The pseudorandomness key recovery game.

Reduction $\mathbb{B}^{\mathcal{H}}$	Oracle $\mathcal{E}(x)$
$\hat{b} \leftarrow \mathbb{A}^{\mathcal{H}, \mathcal{E}}$	$y \leftarrow \mathcal{H}(k  x)$
<b>return</b> $\hat{k}$	<b>return</b> $y$

**Fig. 3.** The pseudorandomness key recovery game.
